FLYWHEEL

CASTERS AND WHEELS

Catalogue issue F8

ASIA FLYWHEEL

CNAS C065-Q

COMPANY PROFILE

Flywheel Caster Manufacturing Ltd., established in 1981, which is located in Yangjiang city, Guangdong of China, with 168,000 square-meter beautiful scenery factory.

We pay great attention to the quality. We are the first to be ISO 9001:2008 certified in this industry in 2001. All of our products go through 5,000 brake test and load capacity test conforms to the caster standard EN 12531. And they are subjected to salt-spray and finish treatment testing to ensure high corrosion-resistance.

Now it already has become a professional caster company which integrates design, manufacture, assemble, inspection and exportation.

Our 20 R&D team can work with you on your drawings or special requirements. 360 sets of equipments and 600 workers ensure our monthly output 3 million pcs. The incoming, processing and final inspection can guarantee the good quality products. 90% of our products are exported to Europe and America, our turnover of 2013 is USD30,000,000.

Our wheel diameter is from 15mm to 300mm, materials include rubber, TPR, PU, plastic, nylon, cast iron, pneumatic, phenolic and sandwich, etc. Our housings have special sizes for different areas, such as Euro type, American type, and the popular type. Casters are more than 50 series, 1000 types for customers' choices and wide different usage, such as, for industrial machine, medical facility, furniture, trolley, shopping cart, forklift, scaffold, shelf, etc.

Welcome to our company to know more about us!

How to Select the Correct Caster & Wheel

Important Notice

Selecting the correct caster for your application is very important. If you do not select the correct caster, you or the users of your equipment could be injured. If you are not absolutely certain which caster is the correct one for your use, contact a safety or engineering consultant who knows your equipment and its intended use to assist you.

Introduction

Casters and wheels are offered in a wide variety of sizes and types. Although there is no simple formula to follow in choosing the proper caster or wheel, the information shown below and on the following pages is intended as a guide to assist you in specifying, operating and maintaining casters for safety and maximum life. Please read this information carefully.

Load Weight & Wheel Size

The first consideration for caster selection is to determine the combined weight of the equipment and maximum load on this equipment. Generally, the greater the weight, the larger the wheel required for the caster. Larger wheels distribute weight and roll more easily over floor obstructions. To determine the load capacity for each caster, divide the combined weight of the equipment and maximum load by the number of casters to be used. This is the load that each caster and wheel must support. Always select a caster and wheel that are rated for a capacity greater than the calculated load per caster. This allows for unusual conditions that could change the performance of the caster.

Wheel Choices

As a general rule, hard tread wheels perform better on soft or smooth floors and soft tread wheels roll better on hard or rough floors including outdoor surfaces. When choosing a wheel type, take into consideration all special floor conditions – tracks, gutters, grates, sills, elevator thresholds, seams and dock plates. The larger and softer the wheel, the greater the ability to roll over rails and similar obstacles. To protect floors from damage, choose softer cushion tread wheels. Solid Cushion Rubber, Advantage ? TPR (thermoplastic rubber), High Modulus Rubber and Pneumatic Rubber wheels will provide quiet operation and maximum floor protection. Steel and Cast Iron wheels are not recommended for floor protection, but they are well suited for industrial applications. Polyurethane wheels like cast iron polyurethane wheels are frequently an effective compromise giving moderate floor protection with greater load capacity.

Wheel Bearings

Plain Bearing:
Wheel bearing bore riding directly on the spanner bushing and/or axle.
Ball Bearing:
Recommended for loads where maximum rolling ease is required. They require less effort to start rolling and keep rolling than other bearing types.
Roller Bearing:
This bearing carries greater loads than same size ball bearing. Well suited for heavier, industrial uses.
Delrin® Bearing:
An economical bearing well suited to conditions of frequent exposure to water, steam cleaning, salts, brine and corrosive conditions.
Flange bearing:
Non-precision industrial grade bearings are press-fitted into wheel hubs.

Unusual / Special Operating Conditions

Often unusual operating conditions require selection of casters and wheels with special features. Listed below are several guidelines for selecting casters for special conditions:

- The presence of acids, oils or corrosive chemicals require wheels made of polyurethane, phenolic, polyolefin or steel.
- Extreme temperatures require special bearing lubricants or plain bore bearings.
- Never use rubber tread wheels in corrosive environments.
- In hospitals, bakeries and food processing plants where cart washings are required, select nickel-plated casters with raceway grease seals and zerk grease fittings.
- For very frequent wash down applications or wet environments, specify stainless steel casters.
- In textile plants and laundries, specify casters with thread guards to reduce the collection of thread, string and general floor debris.
- For office machines such as copiers which require a low load height, choose Flywheel business machine casters and low profile casters.

Safety & Maintenance Information

General Safety & Maintenance Information:

Users are responsible for the proper operation and maintenance of the equipment they use. Some equipment will quickly become damaged and unsafe if abused or subjected to improper demands. If equipment is regularly maintained and not abused, you will get the maximum safety and service performance from your casters.

- Do not overload equipment
- Do not drop heavy loads on carts or trucks
- Do not use at high speeds

These uses create severe impact and shock loads that may lead to caster, wheel and equipment failure.

Check Equipment Frames & Fasteners

Periodically turn equipment on its end or side and check the following:

- Look for broken welds or deck boards.
- Tighten loose nuts and bolts.
- Look for equipment frame distortion caused by overloads and impact loads.

Distorted frames can lead to wheel failure by placing disproportionate loads on one or two Casters.

- If casters are stem types, make sure that the legs of the equipment are not bent and that mounting bolts are securely fastened.
- Always use locknuts or lock washers to mount casters to equipment.
- Make certain casters with expanding adapter stems are held firmly in place in tubular equipment.

Caster Maintenance & Inspection

Check the swivel assembly for excessive play due to wear. If the swivel assembly is loose, it is advisable to replace the fork or the entire caster. If the caster has a king bolt and nut, make sure it is fastened securely. If the swivel does not turn freely, check for corrosion or dirt binding the raceways. Again, it may be necessary to replace the swivel assembly or the entire caster. If the equipment has rigid casters at one end, make sure that the caster fork legs are not bent or distorted.

Wheel Maintenance & Inspection

Check wheels for visible tread wear. Flat spots may indicate accumulation of floor debris such as string or thread which can cause the wheel to bind. Remove the wheel axle bolt and nut. Clean out foreign material and check wheel bearings for wear or failure. Re-assemble if parts are not damaged. Wheel thread guards may be installed to reduce buildup if string and thread wrapping is a continuing problem. After wheels have been inspected and repaired or replaced, be sure to install a new axle nut and tighten it properly. Use lock washers or lock nuts on all axles.

Brake Maintenance & Inspection

Check brakes for proper operation. If brakes slip due to worn or damaged wheels, replace the wheels immediately and retest the brakes. If the brake mechanism itself is not operating properly, repair or replace it. Before returning the equipment to use, always retest brakes.

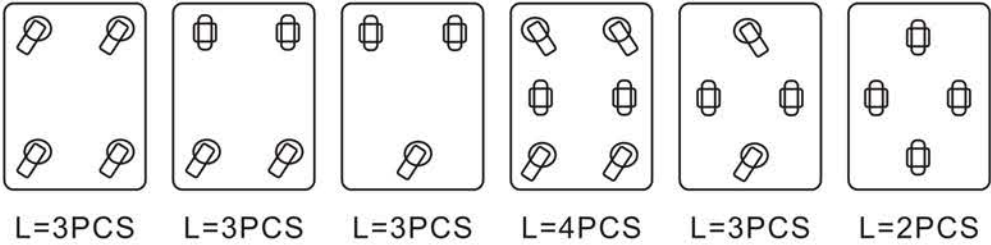

Wheel Material Capability & Characteristic

Wheel material	Load (kg)	Agility	Floor protection	Silience	Shock resistance	Abrasion-resistance	Chemistry-resistance	Suitable Temperature	Hardness
Soft rubber	20~180	Common	Best	Best	Best	Better	Common	-5~50	85 ± 3 (A)

11 Industrial caster

Housing:

Made of pressed steel, zinc plated,
double ballrace swivel head, dustproof seal

Wheel:

Materials: Plastic core black rubber

Hardness: 85±3 Shore A

Bearing type: Roller bearing

Temperature range: -5 °C~50°C

Rad color core available

11 Industrial caster

Housing:

Made of pressed steel, zinc plated,
double ballrace swivel head, dustproof seal

Wheel:

Materials: Elastic rubber, nylon core
nonmarking

Hardness: 70±3 Shore A

Bearing type: Roller bearing

Temperature range: -5°C~70°C

Good shock resistance and wear and tear

20 Low profile caster

Housing:

Made of pressed steel,zinc plated,
single ballrace swivel head

Wheel:

Materials: Hard rubber
Bearing type: Delrin bearing
Temperature range: -5°C~50 °C

Double Ballrace
Swivel Head is Available
Use "N" before code no.

Wheel options:

Stem fittings

Other top plated size are available:

45 European standard industrial caster

Housing:

Made of pressed steel, zinc plated,
double ballrace swivel head,
dustproof seal

Wheel:

Materials: Steel core black rubber
Hardness: 85±3 Shore A
Bearing type: Roller bearing
Temperature range: -5°C ~50 °C

Plain bearing wheel
Use "P" instead of "B"

45 European standard industrial caster

Housing:

Made of pressed steel, zinc plated,
double ballrace swivel head,
dustproof seal

Wheel:

Materials: Elastic rubber
Hardness: 70±3 Shore A
Bearing type: Roller bearing/
Precision double ball bearing
Temperature range: -5°C~70°C
Nonmarking, durable, good shock
resistance, floor protection

Best design-adjustable brake

powder coated, double ballrace swivel head
dustproof seal,heat treated ballrace,
hardened steel balls

Wheel:

Materials: Nylon tread,plastic core
Bearing type: Precision double ball bearing
Temperature range: -5°C~80°C
Plastic on PP core wheel is available.

European type plate is available

New design housing
N29 instead of 29

Directional Lock

Rainbow zinc is available

29 Heavy duty caster

Housing:

Solid steel welded construction,
zinc plated, double ballrace swivel head,
dustproof seal, heat treated ballrace,
hardened steel balls

Wheel:

Materials: Aluminium core polyurethane
Hardness: 90±5 Shore A
Bearing type: Precision double ball bearing
Temperature range: -20°C~80°C

European type plate is available

30 Phenolic heavy duty caster

Housing:

Solid steel welded construction, zinc plated, double ballrace swivel head

Wheel:

3 Types of materials with steel roller bearing is optional.

- 1, Phenolic
Temperature range: 0°C ~ 180 °C
- 2, Phenolic Resin
Temperature range: 0°C ~ 220 °C
- 3, Phenolic Fibre
Temperature range: 0°C ~ 300 °C

Wheel options:

6204 Ball bearing
Cast Iron PU wheel
30XXXBCPU

60 Shock absorber caster

Features

- Medium to high capacity .
- Load springs are interchangeable.
- Double row ball bearing raceway construction for strength.
- Heat treated raceway.

Applications:

Loads requiring shock absorbing cart.

Cast Iron Polyurethane Wheel

Materials: Cast iron polyurethane
Hardness: 90±5 Shore A
Bearing type: Precision double ball bearings
Temperature range: -20°C ~80°C
Diameter range:75-250mm
Standard colour: Yellow
Brown,orange,red,green also available
